

VULNERABILITY ASSESSMENT REPORT

EXECUTIVE SUMMARY

- Target: scanme.nmap.org
- IP Address: 45.33.32.156
- Scan Date: 25 May 2026
- Tools Used: Nmap 7.98,OWASP ZAP 2.17.0
- Prepared By: Krupal Bhindora
- Organization: Future Interns – Cyber Security

Overview

This report presents the findings of a vulnerability assessment conducted on scanme.nmap.org, an officially authorized practice target provided by the Nmap Project for security testing and educational purposes.

FINDINGS

Finding 1 — Outdated SSH Version

- Port: 22/tcp
- Service: OpenSSH 6.6.1p1
- Risk Level:  High
- Description: SSH version 6.6.1 is outdated and contains multiple known vulnerabilities.
- Remediation: Update OpenSSH to latest version immediately.

Finding 2 — Outdated Apache Version

- Port: 80/tcp
- Service: Apache httpd 2.4.7
- Risk Level:  High
- Description: Apache 2.4.7 is outdated and vulnerable to multiple CVEs.
- Remediation: Update Apache to latest version.

Finding 3 — Filtered Ports Detected

- Ports: 25, 135, 139, 179, 445
- Risk Level:  Medium
- Description: Multiple filtered ports detected which may indicate firewall rules hiding active services.
- Remediation: Review firewall rules and close unnecessary ports.

Finding	Port	Risk	Status
Outdated SSH	22	High	Open
Outdated Apache	80	High	Open
Filtered Ports	25,135,139	Medium	Filtered
